(54) Title: CHORDAE TENDINAE GIRDLE

(57) Abstract: A girdle (120) for surrounding the chordae tendinae (136) of a heart valve, and a system (200) and method for delivering the girdle (120). The girdle (120) gathers the chordae tendinae (136) into a bundle to effectively shorten the chordae tendinae (136) to resolve or reduce valve leaflet prolapse. The system (200) includes a girdle (120) releaseably carried within a delivery catheter (132), and a push rod (150) to release the girdle (120) from the delivery catheter (132). The girdle (120) has a filamentous linear delivery configuration and one of several annular treatment configurations. The girdle (320) may have a locking mechanism (350) for locking the girdle (320) in an annular treatment configuration.

* Special categories of cited documents:

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T"

later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X"

document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y"

document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&"

document member of the same patent family
